

AI BASED LIBRARY MANAGEMENT SYSTEM

SHAPING THE FUTURE THROUGH SMART
SOLUTIONS TODAY

AI-BRARY

OUR VISION

To transform traditional libraries into smart, AI-powered learning spaces that make finding books, choosing the right study environment, and accessing library resources faster, easier, and more personalized.

• ALGORITHM TO RECOMMEND BOOKS AND GENRES

The system recommends books based on:

- Books previously borrowed by the user
- Favorite genres
- Search history
- Ratings and reviews
- Books borrowed by users with similar - interests
- Currently trending books

• AI-BASED SLOT & SEAT BOOKING

Students can book seats in the library through the application

- View available seats
- Book a specific seat
- Select study time
- Automatic cancellation after inactivity
- Prevent double booking
- Show real-time seat availability

• SMART TIMETABLE-BASED SLOT RECOMMENDATION

The student enters their timetable once. The AI stores this information and automatically identifies free periods.

AI Recommendations:

- Your best library slot today
- Upcoming exams
- Assignment Deadlines
- User's preferred study duration

• AI POWERED BOOK MANAGEMENT SYSTEM

The librarian/Admin gets an intelligent dashboard.

Traditional Features:

- Add books
- Remove books
- Update book details
- Issue book
- Return books
- Track overdue books

• AI-BASED BOOK SUBMISSION TRACKING SYSTEM

Basic Features:

- Automatically records the book issue date
- Calculates the due date
- Tracks whether the book has been returned
- Detects overdue books automatically
- Calculates late days
- Sends reminders and notifications
- Maintains the user's late-submission history

025. 4 RECOMMENDATIONS THAT READ THE ROOM

Every suggestion is built from what you've actually borrowed, searched for, and rated — plus what readers with similar taste are picking up right now.

THANK YOU
